

National Illicit Drug Prices

U. S. D E P A R T M E N T O F J U S T I C E

Product No. 2007-L0424-002

February 2007

DECEMBER 2006

The Intelligence Bulletin *National Illicit Drug Prices—December 2006* is a compilation of prices obtained by the National Drug Intelligence Center (NDIC) for the six most commonly available and abused illicit drugs in the United States. NDIC's Field Program Specialists (FPSs) and Intelligence Analysts collected the drug prices listed in this report from the sources listed in Table 9. The pricing data collected were the most currently available prices from each source as of year-end 2006. The tables in this report contain prices for powder cocaine, crack cocaine, heroin, marijuana, methamphetamine, and MDMA (3,4-methylenedioxymethamphetamine, also known as ecstasy¹) in 128 U.S. cities and the Commonwealth of Puerto Rico. The cities listed in this report comprise major drug markets and metropolitan areas, are situated along major transportation corridors, serve as regional economic centers, or have high populations relative to their surrounding geographic areas.

National Illicit Drug Prices—December 2006 enables policymakers, law enforcement officials, and individuals concerned about the drug threat to examine one factor—drug prices—relative to other market dynamics that govern the illegal drug trade. However, individuals must be cautious in forecasting trends based on the figures in this report because the data were collected from a sample of cities that were not selected randomly, and this

sample was not designed to provide statistical comparisons between cities or to previous iterations of *National Illicit Drug Prices*. Further, trend analysis as to illicit drug availability cannot be based solely on drug pricing data. While drug prices and availability tend to correlate with one another, drug prices depend on many variables, only one of which is availability. As such, multivariate analysis, inclusive of drug pricing data, is essential to determining drug-related trends and developments.

Drug distribution varies at each level—wholesale, midlevel, and retail. Wholesale-level quantities usually are high purity or high potency and are obtained from source areas or major drug market areas. Midlevel quantities are obtained from wholesale-level dealers or other midlevel dealers, depending on the individual market area. Midlevel quantities typically are less pure or potent because they often are cut with any number of diluents or adulterants to extend the supply and increase profits. Variations in price at the wholesale level and midlevel often are related to the relationships between buyers and sellers, the negotiating skills of both parties, the quantity of drugs involved in the transactions, and the number of criminal organizations distributing drugs in an area. A significant increase in wholesale-level or midlevel prices can signify decreased availability resulting from law enforcement operations, large seizures, or difficulty in transporting a drug.

1. Some "ecstasy" tablets contain other drugs in place of or in combination with MDMA. These drugs include, but are not limited to, MDA (3,4-methylenedioxyamphetamine), methamphetamine, ketamine, and caffeine. Law enforcement typically does not differentiate between MDMA-only ecstasy tablets and multicomponent ecstasy tablets when submitting drug prices.

Significant price changes are most likely to occur at the wholesale level and midlevel. However, retail-level prices generally do not fluctuate. For instance, rather than raise prices to compensate for decreased drug availability, most retail distributors dilute or adulterate illicit drugs to increase the quantity available and thus are able to meet demand. However, a few retail distributors in areas where demand has increased may temporarily increase the price of a drug until availability can satisfy demand. Likewise, retail distributors typically do not lower drug prices during periods of increased availability.

NDIC uses a dash (–) within a table cell to indicate that a price has not been listed; reasons for absent pricing data vary. For instance, some agencies report that they do not conduct a sufficient number of undercover purchases of certain drugs to accurately report a particular drug’s price at a certain level. In addition, some agencies report that local abusers purchase certain drugs elsewhere and transport them to the reporting location. In both cases the drugs may be available in the city listed even though it is not feasible to report a price.

Limitations of Drug Price Data

The following limitations should be considered when reviewing the drug prices reported in Tables 3 through 8.

- Illicit drug prices typically are derived from undercover purchases; however, some of the

reported prices are derived from information provided by informants, some of whom have criminal histories and may not provide completely accurate information.

- Drug distributors often use purity as one attribute in determining the price at which they sell a drug; however, the prices collected for this bulletin very likely have little correlation with purity. In most cases, the prices were derived from undercover purchases, and the drugs purchased may not have been tested for purity.
- The units of weight listed in this report may not be exact. For example, an ounce may not actually contain 28 grams, but may contain 20 grams, 31 grams, or any other quantity. In some areas the term “31” is used to refer to 31 grams, but even a “31” may not contain 31 grams.
- The undercover purchases from which the data are derived most likely constitute a small percentage of the total transactions that occur in a city.
- Many factors that influence price are transient and often reverse themselves.

Price Fluctuations Over the Past 6 Months

Notable changes at the wholesale level (the level at which the most significant changes are likely to occur) in year-end drug prices reported by law enforcement agencies are shown in Table 2 on page 3.

Table 1. Abbreviations and Terms Used in the Tables of This Document

8-ball	1/8 ounce	Ice	ice methamphetamine	NR	no response
BC	BC Bud; Canada-produced marijuana	IM	imported	oz	ounce
bindle	bag	jar	100 tablets	paper	approximately 1/4 gram
boat	1,000 tablets	kg	kilogram	piece	25 grams
bundle	approximately 10-15 bags	lb	pound	PM	powder methamphetamine

*Range not provided in this reporting period.

**When a range was provided in one reporting period, but a single price in the other, differences are not provided.

Analysis of Price Fluctuations

Drug prices typically are influenced by many factors. In some areas of the country for which prices are indicated in this report, prices may indicate substantial increases or decreases because different sources within a law enforcement agency and/or different agencies may have supplied pricing data from one period to the next.² In other areas, specific incidents—particularly law enforcement operations, changes in sources of supply, or changes in primary trafficking organizations—may have affected some wholesale-level prices.

As set forth in the preceding table, the following drug markets experienced increases or decreases in drug prices based on various factors as reported by law enforcement sources:³

Baltimore (MD): In Baltimore, *powder cocaine* prices decreased approximately \$10,000 per kilogram at the high end between June and September 2006 and remained the same at the low end. Law enforcement sources report that some Baltimore cocaine traffickers have begun obtaining cocaine directly from a Texas source of supply for \$14,000 per kilogram and may not be using sources in New York City, who charged higher prices, as frequently.

Between August and November 2006, law enforcement operations disrupted two Baltimore distribution organizations. The disruption of these organizations may drive up prices in the first half of 2007.

Boston (MA): A pound of *ice methamphetamine* was purchased for \$21,000 in Boston during a Mobile Enforcement Team (MET) operation in late 2006; this purchase price was \$5,000 more than what the drug had been purchased for in prior operations, and it consequently increased the reported price range. Law enforcement reports that methamphetamine prices tend to be higher throughout New England because supplies of methamphetamine are more limited in New England than in other areas of the country.

Fargo (ND): In Fargo, *powder methamphetamine* prices decreased \$6,000 per pound at the low end and \$7,000 per pound at the high end between June and December 2006. The decreases are attributed to the increase in demand for ice methamphetamine and a concomitant decrease in demand for powder methamphetamine.

Kansas City (MO): *Ice methamphetamine* prices decreased approximately \$7,500 per pound in Kansas City. Price decreases can be attributed in part to an increase in availability and demand for powder cocaine during late 2006. Initiates to illicit drug abuse are more likely to try powder cocaine than methamphetamine because of the successful media and law enforcement education campaigns publicizing the long-term dangers of methamphetamine abuse. Additionally, some former methamphetamine users in Kansas City have been switching to powder cocaine. As a result, fierce competition has arisen among methamphetamine and cocaine distributors, which quite likely corresponds with the reported decrease in methamphetamine prices in Kansas City as methamphetamine distributors attempt to regain some of their lost user base.

Mobile (AL): *Powder cocaine* prices decreased approximately \$5,000 per kilogram at the low end and \$6,000 per kilogram at the high end in Mobile over the past 6 months, primarily because of an increased supply of the drug. In the aftermath of Hurricane Katrina, there has been an influx of Mexican drug traffickers along the Gulf Coast region. The drug traffickers have been flooding the market with powder cocaine, which has caused a decrease in price at all levels.

Philadelphia (PA): In Philadelphia, *powder methamphetamine* prices increased approximately \$5,000 per pound at the high end and remained the same at the low end over the past 6 months. The Philadelphia/Camden High Intensity Drug Trafficking Area (HIDTA) reports that Mexican trafficking organizations are beginning to infiltrate the area, replacing Caucasians and outlaw motorcycle gangs

2. Contact was made with agencies that provided pricing data for previous periods. If no response was received, another agency in the same area was contacted in order to avoid gaps in the reporting.

3. Sufficient data and information were available upon which an analysis could be drawn as to price fluctuations in the indicated areas. Only prices were available for other areas reporting notable changes.

(OMGs) as primary distributors. As such, Mexican drug trafficking organizations (DTOs) may be beginning to influence market dynamics, including prices.

Increased competition typically results in decreased prices if all other market factors remain constant; however, increased Mexican DTO activity could be causing higher prices in the Philadelphia area for several reasons, including but not limited to the following: Mexican DTOs are incurring transportation costs to get the drug from the laboratories in Mexico to the Philadelphia market, and those costs are being passed on to the local wholesale-level distributors. Additionally, the possibility of violence erupting between the new Mexican distributors and the OMGs and local independent dealers could be driving prices up in the short term. Moreover, if the Mexican distributors are selling a higher purity powder methamphetamine than that being sold by the Caucasian independent dealers and

OMGs, the Mexican distributors could be receiving a higher price.

Seattle (WA): The \$6,000 per kilogram decrease in *powder cocaine* prices at the low end in Seattle between June and December 2006 is attributed by law enforcement, in part, to cocaine distributors lowering prices at the wholesale level in an attempt to lure current methamphetamine users toward powder cocaine. A switch among illicit drug users from methamphetamine to cocaine has become increasingly evident through 2006, and the situation will most likely continue through the next reporting period.

Table 3. Powder Cocaine

State/Territory/District	City	Price in Dollars		
		Wholesale	Midlevel	Retail
Alabama	Birmingham	17,500-20,500/kg	750-1,000/oz	80-100/g
	Mobile	18,000-22,000/kg	800-1,200/oz	100-120/g

*Some “ecstasy” tablets contain other drugs in place of or in combination with MDMA. These drugs include, but are not limited to, MDA (3,4-methylenedioxyamphetamine), methamphetamine, ketamine, and caffeine. Law enforcement typically does not differentiate between MDMA-only ecstasy tablets and multicomponent ecstasy tablets when submitting drug prices.
